Professional Summary

Electrical and Electronics Engineering graduate with hands-on experience in embedded systems, electric mobility, and software development. Skilled in C#, .NET, PostgreSQL, and Git/GitHub with practical experience building real-world projects involving automation, battery management systems, and intelligent monitoring solutions. Strong problem-solving, mentoring, and technical communication abilities with a growing focus on backend application development.

Education

B.E. Electrical and Electronics Engineering
V.S.B Engineering College, Karur — Completed 2026
CGPA: 8.21/10

Higher Secondary Certificate (HSC)
Cheran Matriculation Higher Secondary School — Completed 2022
Percentage: 82.1%

Secondary School Leaving Certificate (SSLC)
Cheran Matriculation Higher Secondary School — Completed 2020
Percentage: 75.9%

Technical Skills

Programming Languages: C#, Java, HTML (Basic).
Frameworks & Technologies: .NET, LINQ.
Databases: PostgreSQL.
Tools & Platforms: Git, GitHub, Arduino IDE.
Embedded Systems: BLDC Motors, Battery Management Systems, Arduino (UNO, Nano, Mega), Sensors.
Soft Skills: Team Collaboration, Technical Mentoring, Problem Solving, Leadership, Communication, Self-Learning.

Projects

Automatic Battery Switching System for Electric Vehicles

- Designed a dual-battery switching system to ensure uninterrupted EV operation during low battery conditions.
- Implemented relay-based battery selection logic using real-time voltage monitoring.
- Improved system reliability through automated battery management and status tracking.

Multi-Layer Intelligent Anti-Theft System for Two-Wheelers

- Developed an Arduino-based anti-theft system integrating GPS, GSM, vibration sensing, and engine immobilization.
- Implemented multi-sensor verification using accelerometer and lock-tamper detection to reduce false alarms.
- Enabled SMS-based alerts and real-time vehicle location tracking for theft prevention.

Background Remover

- Built a Python and Streamlit-based web application for automated image background removal.
- Developed an intuitive user interface for image upload and processing.
- Published the project on GitHub for version control...

Technical Mentoring & Project Guidance

- Guided and supported undergraduate students in the development and implementation of academic projects.
- Successfully completed and delivered two postgraduate-level projects involving automation systems and machine learning applications.
- Assisted research scholars in understanding project architecture, implementation details, and technical documentation.
- Conducted technical knowledge transfer sessions covering project workflow, problem statements, and solution approaches.

Achievements

- Shortlisted among Top 13 teams out of 250 participants in MSME IDEA Hackathon 2024 for a sensorless SR motor-based EV project.
- Secured 11th place out of 40 teams in Anvenshana National Engineering Expo 2023 for developing a multifunctional robotic system.
